II. Capture d'écran de la réalisation

A. FusionForge

	Titre du document : Livrable
	Référence : L 1.3.2
	Version du 25/09/2011

B. Codendi

The screenshot shows a Mozilla Firefox browser window displaying the Codendi Administration Project Wiki. The address bar shows the URL <https://coclicocdd40.rd.fr>. The page title is "Main Page". The content describes FusionForge as a software forge derived from GForge (versions 4.x). It started as a way to keep the open-source codebase alive, and bring contributors of enhancements together. FusionForge is developed by a group of contributors, ranging from volunteer individuals to members of large organizations and companies. We are also actively collaborating with other forges through the PlanetForge initiative. The free software aspect and the cross-forge collaboration aspects are equally important to the FusionForge project, and were actually triggers for its initiation; the genesis of the project is documented on the announcement.

The page includes a navigation menu with links for Home, My Personal Page, Project Tree, Code Snippets, Admin, and Help. There is also a search box and a table of contents.
